

Aerospace Case Study | Helping Share Knowledge Through Video

One of our aerospace customers was looking for a solution to manage and share organizational knowledge. Aerospace manufacturing involves complex processes, and these need to be explained to relevant employees, to ensure high quality and standardized output. However, these processes help differentiate their company and information on them needs to be kept secure, as a breach could put them at a competitive disadvantage.

VIDIZMO, provides a Gartner Recognized Enterprise Video Content Management System, which is secure yet convenient. Through an easy-to-use YouTube-like platform, the organization's users can now upload videos on complex processes and share them with new employees. The system offers rich access management features where they can restrict access to videos on a user or group level. Lastly, all data is stored in the customer's on-premise datacenter and streamed on their intranet – making it highly secure.

Overview

VIDIZMO EnterpriseTube

Customer Challenges

They required an easy-to-use application where users could easily upload videos and share them ahead conveniently. Without users having to break their heads trying to understand a complex video platform.

They needed a solution which they could deploy in their secure on-premise datacenter.

Our Solution

VIDIZMO EnterpriseTube offers a familiar YouTube-like interface to upload videos and share them ahead conveniently. These videos are optimized for video playback, such that they play on any browser or device.

You can add quizzes, handouts, surveys, comments and timed annotations to videos – for greater collaboration.

VIDIZMO EnterpriseTube can be deployed on-premises, in Azure or AWS (Gov or Commercial) or any other cloud of choice. It can also be purchased as a SaaS application.

High-quality live and on-demand video streaming optimized for various devices and bandwidth conditions

Add quizzes, surveys, timed annotations and handouts to videos

For each video – choose who can access them. Select users, groups, departments or the entire organization

Automatically transcribe videos and translate these transcriptions into more than 80 languages
