

# VIDIZMO enables California Department of Corrections and Rehabilitation to stream video across 30+ facilities with Wowza

The California Department of Corrections and Rehabilitation (CDCR) manages the prison system for the State of California to enhance public safety, provide restorative justice and conduct successful rehabilitative strategies for reintegrating offenders into the community.

Looking for a solution to securely stream live and on-demand video to their internal and external networks across 30+ facilities to communicate and share news, training videos and other content, they turned to VIDIZMO for a viable solution.

EnterpriseTube solved their challenges by enabling them to securely stream, manage and share videos through Wowza on an integrated platform using video portals, security and access controls, and an organized system.

Gold Cloud Platform

## Customer Challenges

The department needed a platform where they could stream on-demand videos across 30+ facilities across California for training and keeping their internal teams updated on current news and events going on in HQ and other departments.

They also needed to stream live video and conduct town hall meetings across their facilities to communicate and keep everyone, including the management, up to date with recent developments.

The solution needed to be deployed on-premise with extensive security options to prevent unauthorized individuals from accessing the platform or content, and carrying out certain actions and activities.

They also needed to stream video content to the public while preventing them from accessing content meant only for internal audiences easily.

## Partner Solution

VIDIZMO EnterpriseTube provided CDCR with an internal video portal through which they could stream live and on-demand videos to their network by integrating the platform with existing Wowza servers on their on-premise infrastructure.

Using role-based access control, they were able to assign certain roles to users for controlling access and permissions to carry out certain actions on the platform to prevent unauthorized activity. EnterpriseTube also provided them with multitenancy, so they could leverage an external portal with autonomous security to stream and share video content with the public and external audiences while preventing unauthorized access to off-limits content, maintain content segregation and avoid tedious management of permissions for each user.

Furthermore, VIDIZMO allowed CDCR to store content on a hybrid infrastructure; internal content on-premise and public content on cloud.

VIDIZMO's role-based access control allowed them to assign permissions and enable only certain users to access content based on their authority.

By integrating with Wowza servers on a hybrid infrastructure, VIDIZMO provided seamless live & on-demand video streaming for training and communication across CDCR's 30+ facilities.

VIDIZMO enabled them to host data in a hybrid model both on cloud and on-premise.

To segregate content and maintain privacy between internal and external audiences, VIDIZMO provided multiple portals with complete autonomy over security, content and storage.
