

Streamlining Digital Evidence Management For the County of Santa Clara

The County of Santa Clara needed a system to manage its digital files, evidence in particular, and implement strict access and security controls to protect them from unauthorized access. This system would be used across multiple county offices including the District Attorney Office (DA), Public Defender Office (PDO), Alternate Defender Office (ADO) and more. They also needed a solution that uses cutting edge technology (current or within roadmap) to improve efficiency of media management, which included requirements for redaction, AI facial and object recognition, and more.

As part of a project, VIDIZMO is to implement its Digital Evidence Management System (DEMS) to allow the county to streamline its evidence management, and store and process it in the County's secure instance within Azure Government.
