

## VIDIZMO enables NESIC to Stream and Manage their Video Assets

NEC Networks & System Integration Corporation or NESIC is one of Japan's leading IT solutions providers and resellers. Their clients include enterprises, telecommunications carriers, and central and local governments.

The corporation faced challenges to securely share and manage their increasing amounts of corporate videos, including recorded Zoom meetings, training videos, marketing content and other video assets. VIDIZMO enabled NESIC to leverage their video assets for a wide variety of use cases, including training & on-boarding, external marketing and video content management using an integrated and consolidated solution.

## EnterpriseTube

### Customer Challenges

NESIC consistently produced large amounts of videos needed to be stored, managed and shared for various use cases. These included recorded Zoom meetings that needed to be kept private and secure for authorized viewing only.

In addition to managing their recorded meetings, they needed a solution for effectively streaming and employing their videos for training and on-boarding their new and existing employees.

They also needed to externally stream marketing videos for promoting their brand and products & solutions while keeping their internal content private and only accessible to the relevant authorized people without having to leverage an entirely different platform for managing and employing their internal and external-facing videos.

The solution also needed to be deployable on the cloud and compliant with Japanese data frameworks.

### Partner Solution

With VIDIZMO EnterpriseTube's scalable storage, NESIC no longer had to worry about how to store their ever-increasing video assets. The solution was deployed on their Azure cloud with Japanese compliance offerings.

The platform seamlessly integrated with Zoom to automatically ingest their recorded video conference meetings for streaming and managing as on-demand videos. Configurable user groups and access control allowed them to ensure only authorized people were able to view a recorded meeting.

EnterpriseTube also allowed them to add quizzes in their training videos for knowledge checks and handouts like presentations to provide supplementary information for their marketing videos.

NESIC was able to create categories to easily arrange, find and share relevant content for their different use cases. And by employing different portals for their internal and external audiences, they were able to entirely segregate and restrict access to their internal content while sharing marketing videos for their external viewers.

### What Our Customer Says

**"VIDIZMO has remarkable customer service and a customer-first business attitude! From integrations to security, compliance and deployment requirements, VIDIZMO has stayed in contact and helped us along the way"**

*Osamu Kikuchi, Planning and Business Development Manager NESIC.*

Through user groups and role-based access controls, NESIC was able to ensure only relevant and authorized employees were able to view a recorded meeting.

EnterpriseTube's scalable storage and the ability to create categories made it easy to store, organize, find and share relevant content for different use cases.

NESIC was able to add quizzes and handouts to their videos for conducting knowledge checks and sharing provide supplementary information with their videos.
